Education

- **National Institute of Technology, Jamshedpur** — Jamshedpur, India
  Bachelor of Technology — CGPA-8.01 — *Aug 2017 - May 2021*

Experience

- **PhonePe** — Bengaluru, India
  Software Engineer — *Sept 2025 - Present*
  - **Indus Appstore**: Led the rearchitecture of all legacy backend services into Java services for better scalability and reliability. Performed load testing, tuned performance to target numbers, and migrated traffic from old to new services. Monitored metrics and handled on call, resolving post release issues.
  - **Proposal System**: Built a platform based proposal system for the Ads team, replacing Salesforce for Operations. Streamlined the flow from proposal creation and configuration to order confirmation in the Ads Console, saving Ops about **50%** of their time. Later adopted by the Offers and Merchant teams.
  - **Ads Self Serve**: Built a self serve system for advertisers to configure ads, view estimates, calculate budgets, choose placements, and track performance. Increased ad volume by **25–30%** and drove a surge in traffic.
  - **Tech Stack**: Java, Dropwizard, Elasticsearch, PostgreSQL, AWS
- **BitGo** — Bengaluru, India
  Software Engineer — *May 2024 - Aug 2025*
  - **Transaction Monitoring System**: Designed and implemented a microservice for real-time **fraud detection**, high-risk transfer identification, and **anomaly detection**, improving security and compliance.
  - **Travel Rule Compliance**: Developed an independent **funds withdrawal system** aligned with regulatory frameworks in **Singapore**, **Europe**, **Dubai**, and **Korea**, ensuring **international compliance** and **low-latency processing**.
  - **VASP Dashboard**: Built a full-stack web service and admin dashboard for **Virtual Asset Service Provider** to manage **Personally Identifiable Information (PII)**, process transfer claims/rejections, and generate detailed reports in CSV/JSON.
  - **Technical Design Documents (TDD):**: Authored clear and concise **Technical Design Documents** for major features and architectural changes to support cross-team collaboration and faster onboarding.
  - **Mentorship & Code Reviews**: Mentored two backend interns by conducting **code reviews**, assigning tasks, and promoting **Agile practices** and **object-oriented design**.
  - **Tech Stack**: Node.js, TypeScript, MongoDB, PostgreSQL, Kafka, Kubernetes, React.js, Git, Microservices
- **MediBuddy** — Bengaluru, India
  Software Development Engineer — *April 2022 - May 2024*
  - **ABHA Integration**: Led development of **Ayushman Bharat Health Account (ABHA)** features to centralize digital health records, contributing to **150K+ ID creations** and **120K+ linkages**, supporting **certification by NHA.**
  - **Unified Health Interface (UHI)**: Built a scalable **microservice** connecting with partners like **PayTM**, **Practo**, and **Driefcase**, leading to a **25% increase** in online consultations.
  - **CoWIN API Integration**: Integrated government **CoWIN APIs** for COVID vaccination records; over **100,000 certificates downloaded** through the MediBuddy platform.
  - **Offline Consultation Platform**: Developed a hybrid consult module to promote **in-person appointments**, resulting in **200% growth** in footfall within 3 months.
  - **Technical Documentation**: Created **Technical Design Documents** and internal wikis to improve onboarding and clarify complex feature rollouts.
  - **Tech Stack**: Nest.js, Node.js, Java, MySQL, PostgreSQL, React.js, Next.js, Docker, Kafka, Jenkins, SQS, SNS, Lambda, Git, Agile Methodologies, REST APIs
- **Axis Bank Freecharge** — Mumbai, India
  Graduate Engineer Trainee — *January 2021 - April 2022*
  - **Failure Retrial Microservice**: Built a backend service using **AWS SQS** to handle transaction retries and detect duplicates, reducing manual intervention and improving reliability by **93%**.
  - **Payment Gateway**: Integrated **Razorpay** as the new processor, reducing failures by **50%** compared to Juspay.
  - **Referral System**: Designed and deployed a **referral program** using Node.js and MongoDB, increasing user-generated revenue by **25%** in 12 months.
  - **System Redesign**: Refactored backend architecture for cost and performance efficiency, achieving **40% faster response times**, **30% lower infrastructure cost**, and **50% CPU optimization**.
  - **Tech Stack**: Node.js, MongoDB, AWS, Docker, Kafka, Microservices, REST APIs, CI/CD, JSON, SQL, Git

Skills

- **Programming Languages:** Java, JavaScript, TypeScript, Python
- **Web Technologies:** HTML, CSS, React.js, Next.js
- **Backend Technologies:** Node.js, NestJS, REST APIs, JSON, JWT, Microservices, Full Stack Development
- **DevOps and Tools:** Docker, AWS (Lambda, SQS, SNS, S3), Git, GitHub Actions, Jenkins
- **Databases:** MySQL, PostgreSQL, MongoDB, Elasticsearch, Database Management Systems (DBMS), SQL
- **Architecture & Design:** Systems Design, OOP (Object-Oriented Programming), Design Patterns, Agile Methodologies, CI (Continuous Integration)
- **Soft Skills:** Problem Solving, Mentorship, Cross-Team Collaboration, Ownership, Communication
